SYSTEM AND METHOD FOR TOPOLOGY
CONSTRAINED ROUTING POLICY PROVISIONING

ABSTRACT OF THE DISCLOSURE

        A system and method for topology constrained routing policy provisioning
between a plurality of sites in a Virtual Private Network (VPN) is disclosed.   The
method comprises enabling graphically defining of relationships between the plurality
of sites of the VPN; and automatically generating at least one routing rule for each
site of the VPN based at least in part on the defined relationship.
